

Update: Worton Park Culvert Replacement Project Phase I—Worton Park and N. Woodlane Culverts

Dear Residents,

After stopping work for the winter months, Great Lakes Crushing, Ltd. will be back on site next week to complete Phase I of the Worton Park Culvert Replacement Project. The Worton Park Drive culvert has been installed and the contractor will begin preparations for excavation of the North Woodlane Drive culvert on Monday, April 10th.

Timing: Unfortunately, the need to relocate a gas line as part of the project delayed work last fall. The gas line relocation is complete and the North Woodlane culvert is expected to be done by early May. Installation of the culvert headwalls and asphalt paving will take place immediately thereafter, with site restoration expected in early June.

Ingress/Egress: Throughout the remainder of the project, Great Lakes Crushing will continue to provide advance notice to residents if there are any temporary road closures, if water service needs to be shut off for any period of time, or if driveway access will be limited.

Wilson Mills Road Work: As you are no doubt aware, the repaving of Wilson Mills Road, from Lander Road to Alpha Drive is currently underway as well. This project is being done by the Cuyahoga County Dept. of Public Works. We apologize for the late notification, but we were advised by the County that an informational flyer would be sent to all homes in the area. Apparently that mailing was somewhat limited, so a copy of the County's flyer is enclosed.

If we receive any new or additional information, it will be posted on the Mayfield Village website at <https://www.mayfieldvillage.com/government/projects/worton-park-culvert>

Thank you for your patience during these disruptive, but necessary, infrastructure projects.
